PROFESSIONAL SUMMARY

Senior Frontend / Fullstack Engineer with 10+ years building high-performance, large-scale Angular applications (Angular 8 through 19) in production for US-based clients. Deep expertise in **NgRx** state management (Actions, Reducers, Selectors, Effects) and **RxJS** reactive programming for complex asynchronous data flows. Proven record leading AngularJS-to-Angular migrations, architecting reusable and testable component libraries, and delivering measurable performance gains — including a 40% TTI improvement and 28% bundle-size reduction on a financial platform serving 200K+ users. Comfortable across the stack, integrating Angular with RESTful APIs backed by Node.js, Java, and .NET services. Strong collaborator in fully remote, Agile teams.

TECHNICAL SKILLS

Angular & State: Angular (1.x–19), NgRx (Actions, Reducers, Selectors, Effects), RxJS (switchMap, combineLatest, takeUntil, custom operators), Signals, Standalone Components, Lazy Loading, OnPush Change Detection, Route Guards, Resolvers

Frontend Core: TypeScript, JavaScript (ES6+), HTML5, CSS3, Sass, Component Architecture, Modular Design Systems, Responsive Design, Cross-Browser Compatibility, Accessibility (WCAG)

Build, Monorepo & Architecture: Webpack, NX Monorepo, Module Federation, Micro-Frontends, Kendo UI for Angular, Advanced Charts & Data Visualization

Performance & Testing: Core Web Vitals, Bundle Analysis, Code Splitting, Tree Shaking, Jest, Jasmine, Karma, Unit / Integration / E2E Testing

Backend Integration: RESTful API design & consumption, HTTP contract validation, Node.js, Java, .NET / ASP.NET Core, Event-Driven Architecture, JWT / OAuth2

Cloud & DevOps: AWS (S3, CloudFront, Route 53, Lambda, API Gateway), Azure DevOps, CI/CD (GitHub Actions, CodePipeline), Docker, Git, GitHub

AI Tooling: GitHub Copilot, Cursor, Windsurf

PROFESSIONAL EXPERIENCE

Senior Frontend / Fullstack Engineer

Sep 2022 – Present

Unosquare (Remote — US Clients)

- Led large-scale Angular initiatives for US enterprise clients, architecting modular single-page applications serving 200K+ active users with a focus on scalability, maintainability, and long-term frontend health.
- Designed and implemented end-to-end **NgRx** state management (Actions, Reducers, Selectors, Effects) to centralize complex application state and eliminate data inconsistencies across multi-step workflows.
- Engineered advanced **RxJS** pipelines for real-time feeds, concurrent API calls, and user-interaction streams using `switchMap`, `combineLatest`, `takeUntil`, and custom operators to keep state predictable and avoid memory leaks.
- Directed full AngularJS → Angular 2+ rewrites and continuous upgrades through Angular 19, introducing Standalone Components and Signals to cut bundle size by **28%** and improve initial render by **40%**.
- Reduced Time to Interactive from 4.2s to 2.5s on a financial platform via OnPush change detection, lazy-loaded feature modules, and preloading strategies, contributing to a **15%** increase in user retention.
- Built reusable, well-tested component libraries (Jest, Jasmine, Karma) following strict modularity and single-responsibility principles, reducing duplicated UI code by ~40%.
- Structured frontend codebases with NX Monorepo and Module Federation patterns to enable independent team workflows and scalable micro-frontend delivery.
- Implemented data-heavy dashboards with advanced charts/graphs and Kendo UI components, ensuring responsive, cross-browser, WCAG-accessible interfaces.
- Collaborated with Node.js, Java, and .NET / ASP.NET Core backend teams — debugging REST responses, inspecting HTTP payloads, and validating data contracts for reliable frontend-backend integration.
- Architected CloudFront-based CDN distributions for high-traffic platforms (2M+ monthly users), reducing international latency by 60% and reaching 95% cache-hit ratios.
- Designed Azure DevOps YAML CI/CD pipelines that cut deployment failures by 45% and shortened release cycles from hours to under 10 minutes.

- Conducted code reviews and mentored junior and mid-level engineers on Angular, NgRx, and RxJS best practices, establishing team-wide frontend coding standards.
- Adopted AI-assisted tooling (GitHub Copilot, Cursor) for scaffolding and refactoring, raising development velocity by ~30%.

Senior Frontend Developer
Registro Único para la Administración Tributaria Municipal

May 2014 – Jun 2022
La Paz, Bolivia

- Designed and developed modular Angular applications for municipal tax platforms supporting thousands of concurrent users, prioritizing component reuse and maintainable architecture.
- Implemented state management with NgRx / Redux to handle complex multi-step forms and dashboard data across large government-facing applications.
- Built reactive data pipelines with RxJS to synchronize UI state with RESTful backends, handling polling, caching, and optimistic UI updates.
- Optimized performance through lazy loading, code splitting, and bundle analysis, reducing load times by ~30% across high-traffic platforms.
- Delivered responsive UI architectures with cross-browser compatibility and WCAG accessibility compliance.
- Partnered with backend teams to design REST API contracts, HTTP interceptors for token management, and error handling, improving data-fetching efficiency.
- Contributed to Agile sprint planning, user-story breakdown, and estimation for predictable delivery.

EDUCATION

B.Sc. in Computer Science
Universidad Mayor de San Andrés

La Paz, Bolivia
